EPA Clean School Bus Program

With funding from the Bipartisan Infrastructure Law, EPA's new Clean School Bus Program provides \$5 billion over the next five years (FY 2022-2026) to replace existing school buses with zero-emission and low-emission models. EPA is offering \$500 million through the [2022 Clean School Bus Rebates](https://www.epa.gov/cleanschoolbus) for zero-emission and low-emission school bus rebates as the first funding opportunity.

(Flyer attached)

Highlights:	Details:
Available Funding	\$500M
Application Period	May 20 th to August 19 th
Funding	MAX: \$375K (for ZE Class 7+ School Bus) and \$20K (Infrastructure)
	Minimum: \$15K (for Propane Class 3-6) and \$15K (Infrastructure)
Eligibility	State and Local government entities that provide bus service: <ul style="list-style-type: none">• Public School Districts (including charter schools)• State Government Entities that own a bus fleet Eligible Contractors (school bus dealers and OEMS); Non-Profit School Transportation Associations; Indian Tribes, Tribal Organizations or Tribally Controlled Schools
Old School Bus Criteria	2010 Model Year or Older; >10,001 GVWR; Must provide service to school district at least 3 days/week
New School Bus Criteria	Battery-Electric, CNG or Propane Drivetrain; 2021 Model Year or Newer; >10,001 GVWR; Must Serve a School District for 5-years
Prioritization	<ul style="list-style-type: none">• High-need school districts and low-income areas• School Districts in rural areas• Tribal School Districts

REPORT

	<ul style="list-style-type: none">• Applicants that serve a school district that meets one or more of the prioritization criteria
Program Limitations	Max of 25 school buses funded per School District; Max funding amounts awarded to fleets in one state will not exceed 10% of available funds

Clean School Bus Program

Building a Better America
with the 2021 Bipartisan
Infrastructure Law

School buses travel over four billion miles each year, providing the safest transportation to and from school for more than 25 million American children every day. However, diesel exhaust from these buses can contribute to air quality problems and has a negative impact on human health, especially for children, who have a faster breathing rate than adults and whose lungs are not yet fully developed. This funding to support low- and zero-emission vehicles that transport our nation's children will benefit communities across the United States, especially communities that have been historically underserved. Schools bus fleets will benefit by using the newest and cleanest technologies available.

The Bipartisan Infrastructure Law (BIL) provides \$5 billion over five years (FY22-26) for the replacement of existing school buses with low- and zero-emission school buses. Under the Clean School Bus Program, half of the available funding is dedicated for zero-emission school buses and half is for clean school buses.

Zero-emission school bus: a school bus that produces zero exhaust emission of any air pollutant and any greenhouse gas.

Clean school bus: As defined by the BIL, a school bus that reduces emissions and is operated entirely or in part using an alternative fuel or is a zero-emission bus.

Eligible Recipients

Eligible recipients are defined as:

State or Local Governmental Entities

That are responsible for:

- Providing school bus service to one or more public school systems; or
- Purchase of school buses.

Eligible Contractors

For profit, not-for-profit, or nonprofit entity that has the capacity to:

- Sell clean school buses, zero-emission buses, charging or fueling infrastructure, or other equipment needed to charge, fuel, or maintain clean or zero-emission school buses; or
- Arrange financing for such a sale.

Nonprofit School Transportation Associations

Tribes, Tribal Organizations, and Tribally-Controlled Schools

That are responsible for:

- Providing school bus service to one or more Bureau-funded schools; or
- Purchase of school buses.

Funding

Awards up to 100% of the cost of the replacement bus and charging or fueling infrastructure are possible, and EPA may award funding for bus replacement and infrastructure through grants, rebates, or contracts.

EPA may prioritize applications that propose to replace buses that serve:

- High-need local education agencies;
- Tribal schools;
- Rural schools;
- Low-income area schools; or
- Applications that provide cost share through public-private partnerships, grants from other entities, or school bonds.

In making awards for low- or zero-emission clean school buses, EPA will consider the following criteria without preference to any individual criterion:

- Lowest overall cost of bus replacement;
- Local conditions, including the length of bus routes and weather conditions;
- Technologies that most reduce emissions; and
- Whether funds will bring new technologies to scale or promote cost parity between old technology and new technology.

Usage Requirements

All replacement low- and zero-emission school buses must:

- Be operated as part of the school fleet for which the award was made for not less than 5 years;

While new buses meet EPA's tougher emission standards, many older buses continue to emit pollutants that can be harmful to health like nitrogen oxides (NOx) or particulate matter (PM). Students are particularly vulnerable to air pollution inside and near older diesel school buses, and these pollutants increase their risk of asthma and other respiratory illness. Bus drivers and other school staff are also exposed to diesel exhaust.

The Bipartisan Infrastructure Law provides an unprecedented amount of funding to clean a substantial portion of the nation's fleet of nearly 500,000 school buses. These new cleaner school bus replacements will produce either zero or low tailpipe emissions compared to their older diesel predecessors. School bus upgrades funded under this program will result in cleaner air on the bus, in bus loading areas, and in the communities in which they operate.

- Be maintained, operated, and charged or fueled according to manufacturer recommendations or state requirements; and
- Not be manufactured or retrofitted with a power unit or any other technology that creates pollution within the school bus, such as an unvented diesel heater.

Learn More

Coming soon! EPA is developing a new website and will post more information in the coming months about the Clean School Bus Program at <https://www.epa.gov/cleanschoolbus>. This new page will feature information about electric and alternative fuel buses, technical resources for fleets about infrastructure considerations, information about upcoming funding opportunities, and details about how to apply.
